DRAFT SCHEDULED FOR AUGUST 17, 2005 BOARD INTRODUCTION

These Educational Specifications are intended for use as a planning guide by architects and others responsible for developing physical facilities in Palm Beach County. The general concept embodied in the specifications is to provide general and adequate details for proposed spaces while leaving ample flexibility for creativity and options in design by the architects.

Philosophy and Goals of the School Board of Palm Beach County (SBPBC) are provided as general directions for programs in the School District and are followed by a listing of General Considerations. The facility list is intended to be a summary of the spaces to be provided, but is sufficiently flexible to accommodate design requirements and compatibility with adjacent space.

Specifications for the various program areas include a common listing of informational categories within each of the areas. Specific information relative to each particular area is included under various headings as follows:

- I. Program Philosophy
- II. Program Goals
- III. Program Activities
- IV. Organizational Nomenclature
- V. Innovations, Experimental Ideas, Other Planned Uses
- VI. Justification for Variance from S.R.E.F.
- VII. Program Facilities List
- VIII. Program Furniture and Equipment
- IX. Special Considerations

The graphic representations of Space Relationships are intended only to establish adjacencies and not to set design. Spaces shall be arranged for the various program areas in a configuration compatible with traffic control, site needs and the following considerations:

- 1. Facilities shall be as functional as possible; that is, they shall be organized in a manner responsive to educational programming requirements in an orderly economical way.
- 2 Facilities shall be as responsive as possible to long-term maintenance goals. The architect shall endeavor to produce a product with the lowest possible life cycle cost.
- 3. Facilities shall be as vandal-resistant as is possible within realistic budget constraints.
- 4. Facilities shall be as aesthetically pleasing as possible, considering neighborhood, shape, materials, colors, etc.
- 5. Facilities shall be designed to provide adequate student movement (circulation) without unnecessary waste.

Special attention is directed to planning for community utilization of the plant and campus, maximum energy conservation and capital budget restraints.

DRAFT SCHEDULED FOR AUGUST 17, 2005 BOARD SPATIAL RELATIONSHIPS

Computer Education/Skills Development Laboratories

MS = Material Storage

I. PROGRAM PHILOSOPHY

Staff and students can expect a clean healthful environment in which to teach and learn. A properly organized and trained custodial staff has the ability to ensure the sanitation and regular cleaning of any facility, if their cleaning program is supported through the cooperation of the entire staff and student body. Custodians are allocated based on the size of the school (square feet) in sufficient numbers to maintain the cleanliness of the facility and care must be exercised that cleaning is their primary function. Redirection of the custodial staff to non-cleaning functions can severely impact the cleanliness of the facility. Staff and students help ensure the success of a custodial program through avoiding abuse of the facility. Our investment in school facilities is protected by initial provision and utilization of sufficient, effective equipment and personnel.

II. PROGRAM GOALS

To provide a safe, sanitary and aesthetically acceptable learning and work environment through proper utilization of human resources, material, equipment and methods.

III. PROGRAM ACTIVITIES

- A. Prepare and maintain adherence to work schedules to ensure regular, daily cleaning of the entire facility in accordance with "Instructional Handbook for Custodians."
- B. Maintain personal use facilities (restrooms, water fountains, shower rooms, sinks) in clean and sanitary condition to minimum standards of State Requirements for Educational Facilities (S.R.E.F.) regulations and in accordance with the "Instructional Handbook for Custodians."
- C. Assure that school grounds are kept free of litter and safety hazards.
- D. Report all hazardous conditions immediately.
- E. Observe and adhere to all safety and fire regulations regarding storage of material and maintenance and use of equipment.
- F. Maintain security of buildings during non-school hours.
- G. Report any items in facility in need of repair.
- H. Maintain custodial equipment so that it is clean and usable at all times.
- I. Use only authorized materials, methods and equipment to accomplish program goals.
- J. Maintain orderly storage and running inventory of custodial supplies and reorder as necessary for timely replacement.
- K. Attend training classes as provided.

IV. ORGANIZATIONAL NOMENCLATURE

Number of custodial staff determined as a function of Budget Department.

V. INNOVATIONS, EXPERIMENTAL IDEAS, OTHER PLANNED USES

<u>Personnel</u> - Desired trend is to employ more competent custodians with better organized work schedules, in-service training and supervision. Total staff shall be able to read and write and must be able to communicate in English. Custodial foreperson must have demonstrated ability to perform in accordance with all requirements of the position.

VI. JUSTIFICATION FOR VARIANCE FROM STATE REQUIREMENTS FOR EDUCATIONAL FACILITIES (S.R.E.F.)

DRAFT SCHEDULED FOR AUGUST 17, 2005 BOARD LANGUAGE ARTS

I. PROGRAM PHILOSOPHY

Language Arts encompasses an extensive range of communication skills and of artistic expression, as well as the body of knowledge about the English language and literature. Although the development of communication skills is a lifelong process, the extent to which students become proficient in these skills while at school is vitally related to their future abilities to function independently and productively in life. Language expresses human imagination and is a primary vehicle for transmitting culture. Literature study provides students with insights into human values, experience and potential, and enables them to acquire familiarity with, and appreciation for, literary masterworks. Since language itself is an important means of giving shape to experience and knowledge and of expressing human hopes and feelings, students shall be instructed in the ways in which language functions and in ways of controlling and using language.

II. PROGRAM GOALS

Instruction in Language Arts involves the skills of reading, writing, speaking, listening and observing. Goals of the English program include the following:

- A. Development of skills which are basic to most other subjects studied and useful, if not vital, to success in our highly verbal culture;
- B. Close acquaintance with the literary tradition which comprises the subject matter unique to English, the broad cultural heritage of the English-speaking people--religious, technological, political, sociological and artistic;
- C. Enhancement of critical judgment through practice in and awareness of, the ways language shapes our world;

DRAFT SCHEDULED FOR AUGUST 17, 2005 BOARD LIBRARY MEDIA CENTER

I. PROGRAM PHILOSOPHY

The school library media program supports the District's Mission, Fundamental Beliefs and Priorities for educational excellence. The number one priority, "To increase literacy for all students in reading, writing, listening, speaking, viewing and presenting", is also the number one priority of each school's library media program.

The library media center is the school's center for information and inquiry, for students, faculty and the school community. The center provides services, instruction, materials, equipment and personnel to assist the faculty in developing an effective educational program. Primary goals of the library media program in Palm Beach County schools are imbedded in the concepts of *collaboration, access, literacy, inquiry and diversity*. Today's library media center is designed for flexible use and electronic adaptability, ready for new technologies as traditional methods are changing the delivery of instruction.

Effective instruction today requires audio, video, and electronic digital resources, including access to information available on the Internet. The media center is part of the globally district-electronic network so that information can be exchanged electronically within the school, the district, the state and the world. Provisions for students and staff to use this electronic network at multiple locations within the library media center and school center require full consideration when designing library media space.

II. PROGRAM GOALS CRITICAL IN THE DESIGN OF LIBRARY MEDIA CENTERS

A. Collaboration

Provide physical quarters of sufficient size and flexibility to allow large, class-size, small groups of students and individual students to work simultaneously in an aesthetically appealing atmosphere. Ample enough space in these areas shall create a traffic pattern around the areas not through each area.

Provide space for consultative services with teachers and staff.

Provide electronic capacity and data connections throughout the library media center for effective utilization of media materials and equipment by teachers and staff.

B. Access

Provide access to the media facilities, media staff, resources and equipment at the time of need for all, regardless of abilities or disabilities.

Provide support to new schools in the process of developing their collections.

C. Literacy

Provide a selection of media and the electronic capacity to utilize these resources in

varied print and non-print formats.

Provide guidance to students and faculty for effective selection and utilization of resources and equipment.

Provide current information about emerging technologies and how to incorporate these new developments into effective instructional practice.

Provide for continuous evaluation and updating of the resources available in the media collection to assure that the school's mission, goals and objectives are being met.

Address discrepancy between start up collection and existing collections.

D. Inquiry

Provide purposeful instruction for students in research and information literacy skills.

Provide opportunities for on-line searching and media-oriented experiences.

Provide opportunities for faculty to keep up-to-date and current with instructional techniques and with their specialized curricular area.

Provide current print, not to exceed an average collection age of twenty years, and non-print materials that support the curriculum.

E. Diversity

Provide guidance in the use of school, community, and global resources for the enrichment of individual experience.

Provide an environment encouraging multi-cultural and global experiences.

III. PROGRAM ACTIVITIES

The school library media center serves students, teachers, adults on the staff, administrators, and people in the local community. Grade Levels for Which Program is Intended 9 - 12

V. INNOVATIONS, EXPERIMENTAL IDEAS, OTHER PLANNED USES

- A. New developments in educational programs, instructional methods, developing technologies and scheduling patterns, with the utilization of media resources which accompany these new developments, dictate flexibility for the library media program. Physical facilities must be flexible in order to meet the changing needs of the school program.
- B. Expanded individual and group use of new digital media and computer capabilities requires adequate facilities that are adaptable for varied viewing and listening activities.
- C. Available computer retrieval of information from network, on-line services and internet.
- D. The library media center should be integral to community schools. Access from outside needs to be considered in design. Maximize resources through community collaboration.
- E. Both students and faculty require publishing and production capabilities, including

video production, computer publishing, and multi-media/multi-image presentations.

- F. Multi-functional use of Instructional Television studio facilities includes previewing, editing, broadcasting, and Distance Learning activities for groups of students and school staff.
- G. Training requirements for both faculty and student(s) are increasing in all technical areas, and flexible space is required for these activities as well as electric and data connections.

VI. JUSTIFICATION FOR VARIANCE FROM STATE REQUIREMENTS FOR EDUCATIONAL FACILITIES (S.R.E.F.)

- A. 830 NSF from Reading Room/Stacks to Auditorium for stage.
- B. 600 NSF from Reading Stacks to Technology Instruction Room.
- C. 100 NSF from Reading Room/Stacks to Auditorium for Video Control Room.
- D. The studio shall be 900 NSF and the control room shall be 360 NSF.
- E. Combine Library Media Specialist's and Technical Processing into one space of 350 NSF. The remaining NSF shall be folded into the Reading Room/Stacks.

IX. SPECIAL CONSIDERATIONS - CONTRACTOR PROVIDED

Refer to <u>GENERAL CONSIDERATIONS</u>, <u>GENERAL SECURITY</u> <u>CONSIDERATIONS AND TRAFFIC CONTROL</u>.

- A. <u>Heating/Cooling/Ventilation</u> As required to meet District Standards.
- **B.** <u>Acoustical</u> As required to meet District Standards. Provide optimum acoustics for rehearsal and teaching areas. Some considerations are as follows:
 - 1. Two main acoustical factors: optimum acoustical environment and optimum hearing conditions by director and every student.
 - 2. Acoustical environment: the maximum background noise level is 25 decibels with the optimum somewhat lower.
 - 3. Reverberation time to allow for the separation of successive sounds is a critical problem in designing rehearsal facilities. The optimum reverberation time for a large rehearsal room is 1.1 seconds. If the time falls below .8 seconds for the band area, or 1.0 seconds for choral area, the room becomes too dead for effective use. If the time is much greater than 1.1 seconds for band, or 1.2 seconds for chorus, then boom, echo, and over-loudness will result, causing severe distortion of sound and producing an impossible rehearsal situation. It shall be noted that the reverberation times for band and choral rehearsal rooms are different and shall not be planned in the same way.
 - 4. Proper distribution of sound depends upon the uniform diffusion of all sounds throughout the room.
 - 5. Frequency levels throughout the full spectrum of audible sound must be allowed to be diffused equally. A proper balancing of materials is essential to eliminate the distortion caused by lack of attention to this detail.
 - 6. Expert advice shall be sought in designing a Music room.
 - 7. Soft wall-finish materials shall be limited to locations higher than students can bump into or reach, i.e., a minimum of 6' above floor.
- C. <u>Floor</u> As required to meet District Standards. Vocal room and band room shall be flat and unobstructed.
- **D.** <u>Walls</u> As required to meet District Standards. All walls acoustically treated to prevent sound transfer to adjacent spaces used for instruction. Walls shall be

constructed to roof deck. Walls and ceilings shall be acoustically treated to provide maximum acoustical effect in each classroom, ensemble room and Music practice room. Provide mirror on one wall in each practice room.

- **E.** <u>Ceiling</u> As required to meet District Standards. Acoustically treated for best musical sound in each classroom, ensemble room and Music practice room. The band room ceiling shall be 22' and the vocal room ceiling shall be 20'.
- F. <u>Lighting</u> As required to meet District Standards.
- **G.** <u>Windows</u> As required to meet District Standards. No outside windows. No window in or near entrance doors. Provide view windows into classrooms and practice area. Observation windows from teacher planning to classroom areas. Windows in instructional area shall be acoustically treated to reduce sound transmission.
- H. <u>Doors</u> As required to meet District Standards. Doors must be secure against break-in to protect equipment. Doors and walls in instructional area shall be acoustically treated to reduce sound transmission. The double door with removable mullions from the rehearsal area to the outside shall be designed so that large instruments can be moved and groups of students can enter and exit quickly.
- I. <u>Water/Plumbing Fixtures</u> As required to meet District Standards.
- J. <u>Communications</u> As required to meet District Standards.
- K. <u>Electrical</u> As required to meet District Standards. Provide master switch for the instrumental and choral areas inside and near the entrance. Each side wall and back wall shall have a minimum of three outlets. The front wall shall have at least four placed at convenient intervals. In addition, retractable floor outlets shall be provided as follows: one at the director's podium location and six at equal intervals. Microphone plug-ins shall be provided in the front of the room -- one at director's podium, plus one on each side at front, 10' apart. In addition, (2) microphone jacks shall be placed in the ceiling so microphones could hang; they shall be placed in front of the room about 10' from the front wall and spaced about 12' 15' apart. The contractor shall provide surround system wiring, speakers, base, subwoofer, etc. for laboratory. The District shall provide the musical equipment, stereo, recorder, CD player, etc
- L. <u>Instructional Technology</u> As required to meet District Standards.
- M. <u>Gas and Air</u> As required to meet District Standards.
- N. <u>Safety</u> As required to meet District Standards.
- **O.** <u>Fencing</u> As required to meet District Standards.
- **P.** <u>Service Drives</u> As required to meet District Standards. Because of the heavy use of music facilities at night, and also because of the need to transport students and equipment by bus and truck, the following shall be considered:

- 1. Provide access to street.
- 2. Convenient, well-lighted access for a large bus.
- 3. Convenient, well-lighted service access to the loading doors.
- Q. <u>Parking</u> As required to meet District Standards.

- k. It is preferred that the instrument storage cabinets are located in the instrument storage room. If instrument storage cabinets are located in the classroom, they should have lockable grill doors to minimize the amount of lost cubic volume.
- 4. <u>Uniform Storage</u> Provide double-tiered rods with shelves above rods on all walls.
- 5. <u>**Robe Storage**</u> Provide single- tiered rods with shelves above rods on all walls.
- 6. <u>Other Built-ins</u> Provide a full-length mirror.
- 7. <u>School Display/Exhibition</u> Provide recessed display cabinet (6'W x 4'H) in hallway near music suite. Display cabinet should be 2' above finished floor.

S. <u>Other Considerations</u>

- 1. Practice Field and Drill Field Provide stabilized, level, grassy area the size of a football field, convenient to the building for use of daytime band drills. Night drills would require the use of the lighted football field. If practice field is not available, provide an area in the parking lot without bumpers to be used by the marching band.
- 2. Music building shall be connected to the other buildings of the campus by well-

lighted covered walkways.

- 3. Campus planning shall minimize sound transmission from other areas into music areas.
- 4. Building to be designed so that transmission of sound is contained within the separate sections of the music department so as not to interfere with other music activities.
- 5. Restrooms to be accessible to all students.
- 6. Hearing Conditions
 - a. Reverberation time to allow for the separation of successive sounds is a critical problem in designing rehearsal facilities. The optimum reverberation time for a large rehearsal room is 1.1 seconds. If the time falls below .8 seconds for the band area, or 1.0 seconds for the choral area, the room becomes too dead for effective use. If the time is much greater than 1.1 seconds for band or 1.2 seconds for chorus, the boom, echo, and over-loudness will result, causing severe distortion of sound and producing a difficult rehearsal situation. It shall be noted that the reverberation time for band and choral rehearsal rooms are different and shall not be planned in the same way.
 - b. Proper distribution of sound depends upon the uniform diffusion of all sounds throughout the room.
 - c. Frequency levels, throughout the full spectrum of audible sounds, must be allowed to be diffused equally. A proper balancing of materials is essential to eliminate the obvious distortion caused by lack of attention to this detail.
 - d. Expert advice shall be sought in designing a music room.
 - e. Soft wall finish materials shall be limited to locations higher than students can bump into or reach, i.e., a minimum of six feet above the floor.
 - f. Classrooms shall be in close proximity to their related areas.

V. INNOVATIONS, EXPERIMENTAL IDEAS, OTHER PLANNED USES

- A. Every business, international and domestic, is dependent upon computers for completing day-to-day activities. If business technology education is to successfully prepare students to enter the workforce at one point in time, it is absolutely necessary that each lab be equipped with a minimum of 38 multi-media computers and peripherals such as laser printers, scanners, plotters, projection panels, digital to analog convertors for the television/computer connection, 30 inch monitor, and laser disc players.
- B. All clusters will employ the cooperative method of instruction.
- C. Every business technology education department should have a server that will necessitate the networking of the business technology education labs. This will allow facilitators to maintain control over student workstations, deliver instructions and assist individual students remotely, as well as perform assessments in a non-traditional manner. If desired by the school site, this network should have a pass through to the main server so that the media center and the school wide e-mail can be accessed by students. This pass through will also allow facilitators to gain access to teacher tools that are on the main server.
- D. Every business technology education lab should be wired to support a lab of 38 multimedia computers. The appropriate wiring consists of CAT (latest version) data

cabling, electrical outlets, and electronics. This will allow for easy access to the Internet.
